

Radial Head Plating System

A straightforward solution for treating fractures **when the radial head is salvageable**

Parallel Plating

The first-to-market precontoured elbow plates are designed to provide **multiple fixation options for fractures** of the distal humerus, olecranon, and coronoid

Tension Band Pin

An interlocking solution designed to provide **low-profile, secure fixation for olecranon fractures or osteotomies** without K-wire irritation or postoperative pin migration

Olecranon Plate

The screw trajectory is designed to allow screws to **capture fracture fragments and avoid other screws** regardless of the screw length selected

90/90 Plating

Acumed Posterolateral Plates offer a solution for **isolated capitellar fractures** and for surgeons who prefer a 90-90 plate application

Anatomic Radial Head

The first anatomic radial head on the market was designed to **replace the patient's native radial head**

Repair or Replace

Comprehensive Elbow Fracture Solutions, From Simple to Complex
